DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 13, 2005 has been entered.

Claim 66 is currently amended.

Claims 1-9, 11-26, 28, 30, 36 and 47-54 are cancelled.

Claims 10, 27, 29, 31-35, 37-46 and 55-70 are pending and are examined on the merits.

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

- 2. Claims 10, 27, 29, 31-35, 37-46 and 55-70 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention, as stated in the last office action.
- 3. Applicant's arguments filed July 13, 2005 have been fully considered but they are not persuasive. Applicants assert that the specification provides detailed guidance to make and use the claimed nucleic acids and plants, in that the claimed nucleic acids can be used as markers in

plant genetic mapping and plant breeding programs, for example, pointing to page 27, lines 22-32 and to Example 14. Applicants also assert that the claimed invention has a well-established utility, but they do not state what that is. Applicants further argue that the specification describes methods for mutagenesis and that the use of mutagenesis to produce mutant plant lines is well known.

Page 3

- 4. The Examiner maintains that the rejection is proper given that the examples that Applicants point to are prophetic and do not specifically teach how the claimed nucleic acids can be used. In addition, the disclosed plants were isolated by mutagenesis and introducing mutations is not a repeatable method for obtaining a plant having a particular desired characteristic. Certainly, it is well known in the art that mutagenesis has been used to produce mutant plants. However, it is also well known in the art that it is highly unpredictable what the genotypes and phenotypes of plants will be when mutagenesis is used. Applicant has not taught how to use the claimed nucleic acids and plants, as stated in the last office action, and it would require undue experimentation to practice the claimed invention.
- 5. Claims 55, 57, 62 and 64 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 55, 57, 62 and 64 are rejected for the recitation of "said plant line" at step (d). after "producing", given that there is no antecedent basis for a plant line in step (c). Amendment of the claim to read "producing a plant line" would overcome the rejection.

No claims are allowed.
